

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1-28. (canceled).

29. (currently amended): A light-emitting device comprising at least an anode, an organic compound layer containing a light-emitting layer, and a cathode which are provided on a substrate,

wherein the light-emitting layer comprises a red light-emitting material having a light-emitting wavelength peak of from 580 to 670 nm, a green light-emitting material having a light-emitting wavelength peak of from 500 to 570 nm, and a blue light-emitting material having a light-emitting wavelength peak of from 400 to 500 nm, and

wherein the green light-emitting material comprises at least one green light-emitting material which is an orthometallated complex;

wherein the red light-emitting material comprises at least one red light-emitting material which is an orthometallated complex.

30-32. (canceled).

33. (currently amended): The light-emitting device as claimed in claim 29, wherein the metal forming the complex for the at least one green light-emitting material which is an orthometallated complex is iridium.

34. (currently amended): The light-emitting device as claimed in claim 29, wherein the ligand forming the complex for the at least one green light-emitting material which is an orthometallated complex is a 2-phenylpyridine derivative.

35. (currently amended): The light-emitting device as claimed in claim 33, wherein the ligand forming the complex for the at least one green light-emitting material which is an orthometallated complex is a 2-phenylpyridine derivative.

36. (canceled).

37. (canceled).

38. (canceled).

39. (canceled).

40. (currently amended): The light-emitting device as claimed in claim ~~36~~ 29, wherein the metal forming the complex for the at least one red light-emitting material which is an orthometallated complex is iridium.

41. (canceled).

42. (canceled).

43. (canceled).

44. (previously presented): The light-emitting device as claimed in claim 40, wherein the ligand forming the complex for the at least one red light-emitting material which is an orthometallated complex is a 2-phenylquinoline derivative.

45. (canceled).

46. (canceled).

47. (canceled).

48. (previously presented): The light-emitting device as claimed in claim 29, wherein the blue, green and red light-emitting materials are contained in the same light-emitting layer.

49. (currently amended): The light-emitting device as claimed in claim 29, wherein the light-emitting layer comprises three different light-emitting layers, each containing only one of the blue, green and or red light-emitting materials are contained in different light-emitting layers.

50. (previously presented): The light-emitting device as claimed in claim 29, which emits a white light.
